

Virtual CP@clinic

CP@clinic has responded and adapted to the COVID-19 pandemic.

The program has specific components to facilitate virtual program implementation, which are supported by a SMART database.

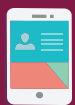

Three options for your paramedic service to implement the Virtual CP@clinic Program for your community:

Why Virtual CP@clinic is needed:

Technology Disparities

Inequity in access to healthcare and basic needs is more prevalent due to shift to online care

Chronic Disease Management

Continued health monitoring is more important than ever due to recent increases in healthcare system stress

Social Isolation

The pandemic has increased social isolation which is related to negative physical and mental health outcomes

Vulnerable Populations

To many, this program could be a crucial lifeline to maintain overall health and wellbeing

Supported by
10 years
of robust
research

Product of
McMaster University

Endorsed by
Health Canada
